

McElroy MiniMc™ Machine are compact, lightweight, highly reliable, accurate and rugged. Perfect for joining 1/2" CTS – 1" IPS (16 mm – 34 mm) service size. The MiniMc™ require only one operator and work in the most difficult condition. McElroy's patented feature and precision engineering provide joint integrity and minimal maintenance. The narrow clamp design provides for butt fusion with precise pipe alignment at the fusion joint. The MiniMc heater is thermostatically controlled and has a durable anti-tick coating. Our insulated heater lining protects the heater and allows carrying while hot.

- Compact, lightweight
- Hand operated
- Thermostatically controlled heater MiniMc Fusion Machine
- Package includes: fusion machine, crew/driver kit, and operator's manual

McElroy Socket Tooling allows socket fusion of 1/2" CTS – 4" IPS pipe. Select the heater, heater adapter, depth gauge/chamfer tool, and a cold ring tool for your application. For 2" and larger fittings, a socket fitting holder is required. Socket heater adapters are available for 1/2" CTS – 4" IPS.

Multiple socket heater adapters from 1/2" CTS – 1" IPS size can be fastened to the side of the heater. This enables saddle fusion heater adapters to be fastened to the heater face independent from the socket adapter. 1-1/4" – 4" IPS socket heater adapters fasten to the heater face.
