

Industrial Drilling Product

QUIK-TROL® LV

QUIK-TROL LV, modified natural cellulose polymer, provide filtration control in most water-based drilling fluid without substantially increasing viscosity. QUIK-TROL LV, when added to a QUIK-GEL® or BORE-GEL™ slurry, yield a drilling mud system suitable for drilling in sandy formation. QUIK-TROL LV can be added to vegetable or mineral oil to provide an oil-based fluid suspension, which can be poured into drill string directly.

Soda Ash

Soda Ash is a white, granular powder primarily used to condition and often make-up water and raise pH

ZEOGEL®

ZEOGEL, attapulgite clay, provide high yield and rheological stability in systems that contain large concentration of salt. ZEOGEL exceed the API Specification 13A viscosity requirement .
