

WEHOLITE

**Versatile lightweight pipe system
for gravity and low-pressure applications**

Weholite provide all the technical advantage of equivalent polyethylene solid wall pipe with substantial saving in weight combining greater ease of installation with increased cost effectiveness.

Weholite pipe represent the latest advance in both material and manufacturing technique. Its unique structure can offer a range of pipe size and ring stiffness, depending on customer requirement. Raw material properties and product technology have been combined to provide a lightweight engineered pipe with superior loading capacity for various application in municipal, industrial, road construction, rehabilitation and marine pipeline application.
