

Fernco Flexible Coupling

Because of their quality and ease of installation, Fernco Flexible Couplings have found wide acceptance among sewer and plumbing contractors and municipalities.

Made of tough elastomeric polyvinyl chloride (PVC), they are strong, resilient and unaffected by soil conditions. They are also resistant to chemical, ultraviolet rays, fungus growth, and normal sewer gases due to the inert nature and physical properties of the material. And they're leakproof, rootproof and seal against infiltration and exfiltration.

The industry's most complete line of couplings allow any two pipe regardless of size or material to be connected quickly and easily.

All Fernco clamps, including the band clamp and housing, are made from Series 300 Stainless Steel. They are corrosion resistant and rust proof. Additional band clots have been added for greater flexibility and the bands are specially designed for greater sealing efficiency.

Fernco couplings flex with earth movement, maintaining integrity of seal.

No special tool needed. Install easily with crewdriver or 5/16" (7.93mm) nut driver or socket (to 60" lb. torque.)
