

DAMAGE INDICATOR

PLCS electronic PE damage & ovality indicator provides instant confirmation of the depth of cuts or gouges in PE pipe to permit a well-informed decision on removal of a damaged section. Use of this tool ensures that gouged pipe is not unnecessarily discarded or, more seriously, left in service when it should have been replaced.

TEST ENDS

PLCS Test Ends are designed to easily pressure test (up to 150 psi.) any length of PE pipe. Full 1/2" to 8" size range. Much less expensive than fusing a disposable PE fitting on each time.

PIPE & DUCT PULLERS

Provide an easy direct connection between PE pipe and any form of pipe laying equipment. The design is in use on many directional drilling rigs and is recognized as the most reliable connector in the industry.

COILPIPE TRAILERS

PLCS Coilpipe trailers are available in Single & Twin Axle chassis with alternative loading options including Autolift or fully Autoload versions. Single Axle designs offer maximum maneuverability, especially on rough terrain, while Twin Axle designs provide maximum stability for the largest coils. The trailers can lay all known coil sizes of PE pipe, including 6" heavy wall pressure pipe, while operating efficiently in confined spaces but maintain the ability to lay high volumes, at high speed, across country.
